Heredity

1. What is meant by the term “heredity”?

2. Draw a picture of an animal cell and label the following parts: Cell membrane, cytoplasm, nucleus, nuclear membrane, ribosomes

3. What is a chromosome and where are they located?

What is a gene and where is it found?

4. What is meant by the term “allele”?
How does a dominant allele differ from a recessive allele?

Determine which allele you have of the following genetic traits:

Widow’s peak _________________________________________________

Free earlobe __________________________________________________

Dimples ______________________________________________________

Curved Thumb ________________________________________________

Bent pinky ____________________________________________________

Digit hair _____________________________________________________

Rolling tongue _________________________________________________

Second toe longer ______________________________________________

Using a punnet square, predict the ratio of offspring produced from these monohybrid crosses: TT (tall) crossed with tt (short), Tt (tall) crossed with Tt (tall), Tt (tall) crossed with tt (short)
5. What does the process of mitosis accomplish?

__________

__________

__________

Draw a sequence of cells that shows the process of mitosis including: prophase, metaphase, anaphase and telophase.

Briefly explain how the DNA in the chromosomes is copied during this process.

__________

__________

__________
6. What does the process of meiosis accomplish and how does it differ from mitosis?

_________________________________________________________________

_________________________________________________________________

_________________________________________________________________

Draw a sequence of cells that shows the process of meiosis including: prophase I & II, metaphase I & II, anaphase I & II and telophase I & II.

Do the cells resulting from meiosis remain haploid? Explain.

_________________________________________________________________

_________________________________________________________________

_________________________________________________________________
7. Describe how DNA encodes the specific proteins that result in genetic traits. Demonstrate your knowledge of this process by using diagrams or paper models.

8. What is a mutation? Using the diagrams or models created in question 7 to illustrate the effect of a mutation on the genetic trait.

9. Know at least five genetic disorders and tell a story about a famous person or someone that you know who has had one of these disorders.
   1. 
   2. 
   3. 
   4. 
   5. 

10. Is Biological Heredity the only factor contributing to your character, i.e., what makes you who you are?

11. Find 3 statements from Ellen Whites writings that relate to the previous question
   1. 
   2. 
   3. 
   4.
